18th Annual Meeting of Chinese Society of
Cosmetic Surgery and Anti-Aging Medicine

103 會議室

激光在全人牙醫學的新時代

There is an arising trend of dental treatments toward personalized and treating the whole person. Ancient proverb said: The best treatment to disease is Prevention.

In the field of Holistic Dentistry there are a wide spectrums of clinical applications, like the dental distress syndrome, dental amalgam toxicity, periodontal and systemic health and oral infection, and the treatment of compromised cases.

Comfortable, effective and safe is the primary concern of the patients during the procedures of dental treatment. However, no matter how about the structural trouble, mental problem and neurological disorder, anatomical limits and skills of the dentist, the dental treatment is an invasive surgery. So, minimal invasive technique with lasers as bioenergy to perform surgery or stimulated self healing develop a prominent benefits to dentists and customers.

Various laser wavelengths can be utilized in dental procedures such as incision, excision, ablation, coagulation and LLLT.

Different lasers have their indications for clinical use. Diode, CO2, Er:YAG, Er:Cr:YSGG were applied in the courses of dental treatment will be discussed in this presentation. The clinician as well as the researcher will be able to answer the questions of the present and future use of Lasers in Holistic Dentistry in order to achieve a predictable clinical outcome in ordinary and compromised clinical conditions.
